CHAT LANGUAGES

TALK TO GUESTS EVERYWHERE**Voice-to-Voice chat**

NEW

- Guests hold a fully spoken conversation with the AI: talk, listen, even interrupt it mid-sentence, hands-free.
- Hardened to work reliably on iPhone, Safari and Android.
- Hotels pick the agent's voice, speaking speed and pitch, with a simple on/off toggle.
- Guests can chat in 12 languages via the new language picker.

AI Phone Agent, rebuilt

- Calls now run on a new in-house voice engine, for faster answers and a warmer, more human voice.
 - Self-serve customisation: greeting, voice with audio previews, accent, speaking speed and background ambience.
 - Call transfers are announced to the caller and always reach the number the hotel configured.
 - Every call produces a transcript plus post-call analysis that flags questions the AI couldn't answer.
 - Callers can change or cancel a pending booking within the same phone call.
 - The agent discloses it is an AI at the start of every call, EU AI Act ready.
-

WhatsApp becomes a full booking channel NEW

- Hotels connect their WhatsApp Business number in a few clicks.
 - Guests book over WhatsApp with tappable room and rate lists, photo galleries and one-tap confirmation.
 - WhatsApp conversations appear in transcripts and guest profiles as their own clearly-badged channel.
-

Staff Assistant NEW

- A separate AI assistant for the hotel team, opened from its own button in the dashboard.
- Answers from the hotel's knowledge base, with citations that open the source document at the exact page.
- Every knowledge entry can be scoped to guests, staff or both, so each assistant only sees what it should.
- Protected by the dashboard's own sign-in, so only real team members can use it.

MORE WAYS TO GROW REVENUE

Extras & add-ons in the chat cart NEW

- Guests add breakfast, parking, late checkout and more directly in the cart, at live per-hotel prices.
- Ask the AI for an extra in conversation and it lands in the cart automatically.
- Extras sync from the hotel's own system across 8 platforms: RMS, Apaleo, Cloudbeds, Clock, HOP, Maxxton, StayNtouch and Oracle OPERA.
- Hotels control exactly which extras the AI is allowed to offer.
- Purchased extras are written back into the hotel system together with the reservation.

Tours & Experiences EARLY ACCESS

- Guests discover and book Viator tours, with photos, prices, ratings and live availability, right in the chat.
- Hotels connect, curate and resync their own tour catalogue per property from the dashboard.

Post-booking self-service

- Guests get a booking history inside their chat profile.
- They can cancel or edit a booking themselves, no phone call needed.
- A Pending tab surfaces bookings awaiting payment, and stuck bookings can now be cancelled.
- Honest statuses everywhere: Payment Pending, Failed and Partially Failed replace a blanket "Confirmed".

KNOW YOUR GUESTS

Transcripts & conversation insight NEW

- New Transcripts screen: every guest conversation in one place, filterable by channel and date.
 - Search by guest or booking; find-in-conversation highlights matches as you step through them.
 - The AI flags questions it couldn't answer across chat, voice and WhatsApp, so hotels can close knowledge gaps.
 - Voice conversations include recordings and call details.
-

Analytics that show the money

- Google Analytics now tracks the full booking funnel, from browsing and cart to checkout and purchase, including cart abandonment.
 - Engagement measures: time spent per hotel, extras funnel, voice usage, image browsing and link clicks.
 - Visits from AI browser assistants are measured too, so hotels can see this emerging traffic.
 - Every chat records whether it ended in a booking, powering accurate conversion reporting.
 - A new Usage tab shows each hotel's plan, allowance usage and six months of history.
-

A richer Knowledge Hub

- Connect Instagram, TikTok and Google Business Profile so posts, videos and live reviews feed the AI's knowledge.
- Document uploads up to 10MB (up from 4MB), with a built-in PDF viewer.
- Website knowledge is stored page-by-page and refreshed automatically, keeping answers current.
- Property details gathered from the website can now be corrected directly on the dashboard.

A SMOOTHER BOOKING EXPERIENCE

Booking flow refinements

- Edit a stay already in the cart, including rooms, dates or guests, without starting over.
- Enter guest details once and apply them across a multi-property trip.
- Infants now count in searches, and parties break down into adults, children, infants and pets.
- Guests are told why a rate is unavailable (such as a minimum stay) instead of facing a disabled button.
- Holiday parks can show room- and site-level availability, with equipment and capacity details.
- The cart locks during payment and unlocks when the timer ends, so there are no more stuck checkouts.

A widget that fits every brand

- Three launcher styles, floating button, prompt bar or booking filter card, configured from the dashboard.
- An optional, customisable "You're chatting with our AI assistant" notice, with live preview.
- The chat greets signed-in guests by name.
- Logos of any shape display correctly, and switching brands never leaks the previous brand's look.

PLATFORM, SECURITY & TRUST

Faster, stronger foundations

- The entire production backend now runs on a rebuilt, faster platform.
- The production AI was upgraded to a newer, smarter language model.
- SOC 2 hardening: tighter data-access rules, personal data removed from logs, stricter role checks.
- Releases now roll out with fewer restarts and less disruption; groundwork laid for a dedicated payment-card security vault.
- Two new hotel-system connections: Oracle OPERA Cloud and Channex, with certification-ready itemised bookings.

— CONNECTIONS ADDED THIS RELEASE

INTEGRATION	WHAT IT BRINGS
WhatsApp Business	Guest conversations and interactive bookings over WhatsApp
Instagram	Property posts feed the AI's knowledge
TikTok	Videos feed the AI's knowledge and play inside the chat
Google Business Profile	Live Google reviews, per property
Viator	Bookable tours & experiences (early access)
